Thursday, October 3, 1974
Saturday, August 30, 1980
and most of all, to
Friday, April 9, 1982

INTRODUCTION:

The Days of Futures Passed

This idea for this book came in the year HAL wasn't born, Skynet didn't attempt to destroy the human race, and worst of all, the *Jupiter II* wasn't launched. All things considered, the real world's version of the year 1997 was a pale imitation of the momentous year chronicled by many science fiction stories, books, and media.

Of course, science fiction has taken it on the chin from reality before. The atom bomb was first used in war on August 6, 1945 — *not* the 1960's, as H.G. Wells had told us. On April 12, 1961, Yuri Gagarin in *Vostok I* — and *not* Richard Seaton in *The Skylark of Space* — became the first man in space. Armstrong and Aldrin made the first footprints on the Moon on July 21, 1969 — *not* Cavor and Bedford, nor even Leslie LeCroix. The closest that the world of 1984 came to universal totalitarianism was Apple Computer's Superbowl commercial. In 1990, the United States and Russia fought a long-awaited war in the Persian Gulf — but incredibly, almost insultingly, they were on the *same* side.

This process accelerated as the 1990's wore on. One by one, the great days and years of science fiction have fallen like wheat before a thresher. World Wars III and IV — *gone*. Luna City, Marsport, Venus Equilateral — *gone*. The Eugenics Wars and the great ecological disasters of the mid-90's — *gone*. Computer overlords, intelligent apes, conversations with dolphins — *gone*. A dozen alien invasions, visitations, and First Contacts — *gone*. Space hotels, colonies on Mars and

Venus, blind poets of the spaceways — *gone, all gone.*

Soon, even the archetypal science fiction year — 2001 — belonged to the past rather than the future. Steadily, year by year, the glorious twenty-first century will be devoured.

Between the covers of this book, the real world is held at bay, and the dates of science fiction and fantasy are preserved. Here is a science-fiction event for every day of the year — and for quite a few days that *aren't* part of the year, also. Within these pages, you'll find events from classic stories, books, comics, TV shows, and movies, all arranged in a day-by-day format. When possible, publication or production dates are included so you can place each vision in its historic context. I've included an occasional date from the real world, when it is significant to science fiction (July 20, 1969 is an obvious example).

Here you'll also find months from worlds that have no relation to our own, plus a list of alien and alternate names for the days of our lives.

For those who are not familiar with the details or terminology of various alternative calendar schemes (for example, intercalary days), I've also included a short appendix on calendars and calendar reform.

Here you'll find new things to read and see...and I hope you'll run across some old friends, too.

Enjoy!

Don Sakers
Meerkat Meade,
July 2003

PLEASE NOTE: All years are Common Era (also known as A.D.), unless otherwise indicated.

Year Day

(annually): Intercalary day before January 1
(*The Leaves of October* by Don Sakers, 1988)

January

The first division of the year is also known as:

Afteryule (Shire) (*Lord of the Rings*, J.R.R. Tolkien, 1954)

1958: Pioneer 3 Lunar flyby mission launched

Saturday

7

1972: Apollo 17 launched; last manned Moon mission to date

December

8

Pemptos

1957: Nura Nal (Dream Girl of the Legion of Super-Heroes) born (DC Comics)

2977: Karate Kid, Princess Projectra, and Ferro Lad join the Legion of Super-Heroes (DC Comics)

9

Paraskevos

1932: Jim Bendell picks up a hitch-hiker from 3059 ("Twilight" by John W. Campbell, Jr., 1934)

10

Savatos

2225: Lyta Alexander born (*Babylon 5*, 1994-98)

11

Orgilion

1999: Selene forces take control of all bases on the Moon, declare independence (*Millennium* by Ben Bova, 1976)

12

Mahnyeh

2000: Daniel Boone Davis revived from Cold Sleep (*The Door into Summer* by Robert A. Heinlein, 1957)

December

Trewsday

13

(year not given): Bill Smith gets caught in a time paradox
(*Millennium* by John Varley, 1983)

Seiday

14

1994: Astronomer Georgia Parr detects an asteroid in an Earth-approach orbit (*Fellow Traveler* by William Barton and Michael Capobianco, 1991)
2994: Legion of Super-Heroes officially re-formed. Kono and Celeste Rockfish join. (DC Comics)

Ormenel

15

1940: Bartholomew buries a cat ("Fire Watch" by Connie Willis, 1982)

Rodyn

16

Year 11 of the Empire: George Tessera reveals the truth about the Sensorama (*The Third Force* by Marc Laidlaw, 1996)
1917: Arthur C. Clarke born.
2154: Martin Sessui wins Nobel Prize for Physics (*The Fountains of Paradise* by Arthur C. Clarke, 1978)

December

17

Sadday

1903: Oliver and Wilbur Wright make first successful airplane flight

18

Kiriakos

(year not given): Claude Villefranche dies (*To Live Again* by Robert Silverberg, 1969)

19

Dies Phobotis

2002: Thermonuclear bomb destroys Washington, DC, killing President Geddes, Vice President, Stokes and the entire Cabinet. The Hundred Lost Days begin (*First Citizen* by Thomas T. Thomas, 1987)

2962: Princess Projectra of Orando born (Legion of Super-Heroes, DC Comics)

2983: Queen Projectra of Orando is crowned (Legion of Super-Heroes, DC Comics)

20

Tonsday

1872: Phileas Fogg completes his round-the-world journey (*Around the World in Eighty Days* by Jules Verne, 1873)

2218: Simeon Krug's tower reaches 800 meters (*Tower of Glass* by Robert Silverberg, 1970)

December

Orgaladhad

21

1872: Phileas Fogg appears at the Reform Club to claim his reward (*Around the World in Eighty Days* by Jules Verne, 1873)

2800 (Atomic Age): Richard Altmayer sentenced to third, and last, prison term ("In A Good Cause --" by Isaac Asimov, 1951)

2968: Pol Krinn (Magnetic Kid of the Legion of Super-Heroes) born (DC Comics)

Mersday

22

2962: Brek Brannin (Polar Boy of the Legion of Super-Heroes) born (DC Comics)

Homesday

23

(year not given): Lisa Bander's request to be transferred to NASA's Team Alpha is denied (*Shiva Descending* by Gregory Benford and William Rotsler, 1980)

December

24

Prahznyeh

- 2000: A hollow asteroid known as the Stone enters Earth orbit (*Eon* by Greg Bear, 1985)
- 2052: Jenny Sixa throws a party (*The Stranger* by Eric James Fullilove, 1997)
- 2974: Matter-Eater Lad joins the Legion of Super-Heroes (DC Comics)
-

25

Elenya

- 1: Millions of time travelers converge on Bethlehem.
- 904: King Cinhil crowned (*Camber of Culdi* by Katherine Kurtz, 1976)
- 1940: Second World War begins; will continue through 1966 (*Things to Come*, 1936)
- 2025: Spaceship *Barsoom* departs Earth (*The Moon Maid* by Edgar Rice Burroughs, 1923)
- 3018 (Third Age): Company of the Ring leaves Rivendell on their mission southward (*Lord of the Rings* by J. R. R. Tolkien, 1954)
-

26

Demesday

- 1857: Julian West born (*Looking Backward* by Edward Bellamy, 1887)
- 2260: Sheridan attacks Z'ha'dum (*Babylon 5*, 1994-98)

December

Tarehyeh

27

2171: Stephen Molloy O'Toole born (*Garden of Rama* by Arthur C. Clarke and Gentry Lee, 1991)

Hevensday

28

1997: John Stapleton is hanged...for the first time
("December 28th" by Theodore L. Thomas, 1966)
2653: Ran Raxler achieves tenth rank in North-Central
Finals ("The Dwindling Sphere" by Willard Hawkins,
1940)

Menelya

29

1836: Crew of the *Wasp* enters the Hollow Earth (*The
Hollow Earth* by Rudy Rucker)
2092: Computer profile Marianne-prime O'Hara becomes
self-aware (*Worlds Apart* by Joe Haldeman, 1983)

Highday

30

1999: Chet Kinsman meets with U.N. Secretary-General
Emmanuel De Paolo concerning U.N. recognition of
the Moon as the independent nation Selene
(*Millennium* by Ben Bova, 1976)

December

31

Orbelain

1899: First trial of H. George Wells's time machine (*The Time Machine*, 1960)

1999: World ended at midnight PCT, according to Rev. Thomas Barker (*I Will Fear No Evil* by Robert A. Heinlein, 1970)

2000: Justin Foote I born (*To Sail Beyond the Sunset* by Robert A. Heinlein, 1987)

2257: Narn Base in Quadrant 37 is destroyed by Shadows (*Babylon 5*, 1994-98)

Nesan

16

978 (New Era): Council of the Grand Alliance holds its first meeting (*The Wheel of Time* by Robert Jordan)

27

978 (New Era): Battle of Tar Valon begins (*The Wheel of Time* by Robert Jordan)

28

(annually): Danshu festival (*The Wheel of Time* by Robert Jordan)

Solstice

Solstice (annually): Intercalary day after December 31 (*The Leaves of October* by Don Sakers, 1988)

Month 13

The thirteenth division of the year is also known as:

Ahkyahbr (Geled) (Scattered Worlds series by Don Sakers)

Danu (*The Wheel of Time* by Robert Jordan)

Doocall (Bioregional Calendar)

Elul (in embolismic year) (Hebrew Calendar)

Fulfillment (*Dayworld* by Philip José Farmer, 1985)

Gargoyle Moone (Astreiant Lunar) (Points series by Lisa A. Barnett and Melissa Scott, 1995)

Gemini (Mars) (Darian Calendar)

Mac (Mayan Calendar)

Scorpius (Mars) (Woods Calendar)

Sol (International Fixed Calendar)

Danu

1

978 (New Era): Battle of Tar Valon ends (*The Wheel of Time* by Robert Jordan)

28

(annually): First day of the Feast of Lights (*The Wheel of Time* by Robert Jordan)

Month 14

The fourteenth division of the year is also known as:

- Bell Moone** (Astreiant Lunar) (Points series by Lisa A. Barnett and Melissa Scott)
- Duodecember** (Mars) (*The Demolished Man* by Alfred Bester, 1951)
- Kankín** (Mayan Calendar)
- Mithuna** (Mars) (Darian Calendar)
- Nahyahbr** (Geled) (Scattered Worlds series by Don Sakers)
- Ophiuchus** (Mars) (Woods Calendar)
- Sumiesien** (Bioregional Calendar)

Duodecember

35

2301: Ben Reich awakens with a scream (*The Demolished Man* by Alfred Bester, 1951)

Month 15

The fifteenth division of the year is also known as:

Athwinter (Bioregional Calendar)

Cancer (Mars) (Darian Calendar)

Hearth Moone (Astreiant Lunar) (Points series by Lisa A. Barnett and Melissa Scott)

Muan (Mayan Calendar)

Sagittarius (Mars) (Woods Calendar)

Zyeemyahbr (Geled) (Scattered Worlds series by Don Sakers)

Month 16

The sixteenth division of the year is also known as:

Aquila (Mars) (Woods Calendar)

Dyeekyahbr (Geled) (Scattered Worlds series by Don Sakers)

Karkata (Mars) (Darian Calendar)

Onezima (Bioregional Calendar)

Pax (Mayan Calendar)

Month 17

The seventeenth division of the year is also known as:

Capricornus (Mars) (Woods Calendar)

Cumhu (Mayan Calendar)

Leo (Mars) (Darian Calendar)

Month 18

The eighteenth division of the year is also known as:

Asleha (Mars) (Darian Calendar)
Pegasus (Mars) (Woods Calendar)
Uayeb (Mayan Calendar)

Month 19

The nineteenth division of the year is also known as:

Aquarius (Mars) (Woods Calendar)
Virgo (Mars) (Darian Calendar)

Month 20

The twentieth division of the year is also known as:

Cetus (Mars) (Woods Calendar)
Kanya (Mars) (Darian Calendar)
Zeus (Mars) (*Red Planet* by Robert A. Heinlein, 1949)

Month 21

The twenty-first division of the year is also known as:

Libra (Mars) (Darian Calendar)
November (Mars) (*Red Planet* by Robert A. Heinlein, 1949)
Pisces (Mars) (Woods Calendar)

Month 22

The twenty-second division of the year is also known as:

Andromeda (Mars) (Woods Calendar)

Tula (Mars) (Darian Calendar)

Month 23

The twenty-third division of the year is also known as:

Aries (Mars) (Woods Calendar)

Scorpius (Mars) (Darian Calendar)

Month 24

The twenty-fourth division of the year is also known as:

Ali (Mars) (Darian Calendar)

Perseus (Mars) (Woods Calendar)

Under Alien Moons

The month of **AN SEACHDMHIOS**

25

2078: Geordie Doig is sentenced to prison (*Magnificat* by Julian May, 1996)

The month of **CHEWELAH**

16

2078: Anne Remillard crashlands on Okanagan (*Magnificat* by Julian May, 1996)

The month of **DIAD**

32

52013: League attack on liner *Alexasander Grobkin* is repelled (*The Siege* by Bill Baldwin, 1994)

The month of EANAIR

6

2080: Fury and Hydra meet some Hibernia natives
(*Magnificat* by Julian May, 1996)

7

2080: Rebel meeting on Hibernia (*Magnificat* by Julian
May, 1996)

The month of EINSTEIN

28

290: Marianne O'Hara receives a message from Jeff
Hawkings (*Worlds Apart* by Joe Haldeman, 1983)

The month of FLOWER MOON

3

3097: Sherman Weaver writes a letter to Markos Koukidias
("Aristotle and the Gun" by L. Sprague deCamp, 1956)

The month of HEROS

13

4127: Space Force ordered to occupy Chandrasekar
Research Station (“S O S” by Poul Anderson, 1970)

The month of MAZAMA

2

2082: Earthquake magnitude 5.9 strikes the Dirigent’s
residence on Okanagon (*Magnificat* by Julian May,
1996)

4

2082: Cyndia Remillard makes a phone call to Earth
(*Magnificat* by Julian May, 1996)

2600: publication of *This Third Millennium — A Condensed Textbook for Students* (revised microfilm edition) by A.G. Yakimara, H.B., Soc.D., etc. (*Forbidden Planet* by W.J. Stuart, 1956)

**The month of
AN SEACHDMHIOS**

15

2078: Geordie Doig is sentenced to prison (*Magnificat* by Julian May, 1996)

The month of SEXTOR

7

2351: Space Ship *Bellerophon* launched to Altair
(*Forbidden Planet* by W.J. Stuart, 1956)

20

2391: United Planets Cruiser C-57-D returns from Altair
(*Forbidden Planet* by W.J. Stuart, 1956)

The month of SHUKSAN

16-17

2082: The moon Cibebe is destroyed (*Magnificat* by Julian
May, 1996)

The Days of Our Lives

The first day, **Sunday**, is also known as:

- Dies Solis** (Mars) (Darian Calendar)
- Elenya** (Quenya & Númenor) (*Lord of the Rings* by J.R.R. Tolkien, 1954)
- Kiriakos** (Second Terran Empire) (Scattered Worlds series by Don Sakers)
- Orgilion** (Sindarin & Númenor) (*Lord of the Rings*)
- Senkyeh** (Geled) (Scattered Worlds series)
- Sunday** (Hobbits) (*Lord of the Rings*)
- Sunday** (Bioregional Calendar)
- Sunday** (Astreiant) (Points series by Lisa A. Barnett and Melissa Scott)
- Sunneday** (*Web of Stars* by Don Sakers)
- Sunnendei** (Hobbits; archaic) (*Lord of the Rings*)

The second day, **Monday**, is also known as:

- Airday** (Bioregional Calendar)
- Anarya** (Quenya & Númenor) (*Lord of the Rings*)
- Defteros** (second Terran Empire) (Scattered Worlds series)
- Demesday** (Points series)
- Dies Phobotis** (Mars) (Darian Calendar)
- Mahnyeh** (Geled) (Scattered Worlds series)
- Monday** (Hobbits) (*Lord of the Rings*)
- Monendei** (Hobbits; archaic) (*Lord of the Rings*)
- Monoday** (*Web of Stars*)
- Oranor** (Sindarin & Númenor) (*Lord of the Rings*)

The third day, **Tuesday**, is also known as:

Dies Terrae (Mars) (Darian Calendar)
Isilya (Quenya & Númenor) (*Lord of the Rings*)
Orithil (Sindarin & Númenor) (*Lord of the Rings*)
Tarehyeh (Geled) (Scattered Worlds series)
Tonsday (Points series)
Trewesdei (Hobbits; archaic) (*Lord of the Rings*)
Trewsday (Hobbits)(*Lord of the Rings*)
Tritios (Second Terran Empire) (Scattered Worlds series)
Twosday (*Web of Stars*)
Waterday (Bioregional Calendar)

The fourth day, **Wednesday**, is also known as:

Aldëa or **Orgaladh** (Númenor)(*Lord of the Rings*)
Aldúya (Quenya)(*Lord of the Rings*)
Dies Mercurii (Mars) (Darian Calendar)
Grounday (Bioregional Calendar)
Hevenesdei (Hobbits; archaic)(*Lord of the Rings*)
Hevensday or **Hensday** (Hobbits)(*Lord of the Rings*)
Orgaladhad (Sindarin) (*Lord of the Rings*)
Seiday (Points series)
Terartos (Second Terran Empire) (Scattered Worlds series)
Vrenzyeh (Geled) (Scattered Worlds series)
Windsday (*Web of Stars*)

The fifth day, **Thursday**, is also known as:

Dies Jovis (Mars) (Darian Calendar)
Geletyeh (Geled) (Scattered Worlds series)
Menelya (Quenya & Númenor) (*Lord of the Rings*)
Meresdei (Hobbits; archaic) (*Lord of the Rings*)
Mersday (Hobbits) (*Lord of the Rings*)
Ormenel (Sindarin & Númenor) (*Lord of the Rings*)
Pemptos (Second Terran Empire) (Scattered Worlds series)
Reasday (Points series)
Thirstday (*Web of Stars*)

The sixth day, **Friday**, is also known as:

Dies Veneris (Mars) (Darian Calendar)
Eärenya or **Oraearon** (Númenor) (*Lord of the Rings*)
Freeday (*Web of Stars*)
Highday (Hobbits) (*Lord of the Rings*)
Highdei (Hobbits; archaic) (*Lord of the Rings*)
Homesday (Points series)
Orbelain or **Rodyn** (Sindarin) (*Lord of the Rings*)
Paraskevos (Second Terran Empire) (Scattered Worlds series)
Soobtayeh (Geled) (Scattered Worlds series)
Valanya or **Tárior** (Quenya) (*Lord of the Rings*)

The seventh day, **Saturday**, is also known as:

Dies Saturni (Mars) (Darian Calendar)

Orbelain/Rodyn or **Valanya/Tárion** (Númenor) (*Lord of the Rings*)

Prahznyeh (Geled) (Scattered Worlds series)

Sadday (*Web of Stars*)

Savatos (Second Terran Empire) (Scattered Worlds series)

Sterday (Hobbits) (*Lord of the Rings*)

Sterrendei (Hobbits; archaic) (*Lord of the Rings*)

The eighth day is known as:

Astellos (Second Terran Empire) (Scattered Worlds series)

Septday (*Web of Stars*)

Solday (*The Leaves of October* by Don Sakers, 1988)

The ninth day is known as:

Octday (*Web of Stars*)

Orbakios (Second Terran Empire) (Scattered Worlds series)

Terraday (*The Leaves of October*)

The tenth day is known as:

Imparios (Second Terran Empire) (Scattered Worlds series)
Novaday (*Web of Stars*)
Starday (*The Leaves of October*)

The 34th day of October is known as:

Piltic (“The Man Who Rowed Christopher Columbus Ashore” by Harlan Ellison, 1997)

The 35th day of October is known as:

Sqwaybe (“The Man Who Rowed Christopher Columbus Ashore” by Harlan Ellison, 1997)

NOTES:

The Martian day, 24.66 hours, is called a “sol.”

The Quneya and Sindarin week was six days long. Númenor generally used both Quenya or Sindarin names of the days, but added a seventh day (Eärenya/Oraearon) between Menelya/Ormenel and Valanya/Tárior/Orbelain/Rodyn.

A “day” (or “dayye”) in the Web of Stars denotes a period of 100,000 seconds, or 27.78 hours.

ONE MORE EVENT

Twenty Minutes into the Future

Edison Carter's digitized personality is used to create the virtual being called "Max Headroom" (*Max Headroom*, 1987-88)

APPENDIX:

On Calendars and Calendar Reform

The civil calendar in use through most of the world today, called the Gregorian Calendar, is a fusion of three separate timekeeping traditions. Each, in its own way, attempted to subdivide the Earth's year of 365.2422 days into more manageable units.

The ancient Egyptian Calendar, which dates from about 3000 BCE, was based on the movements of the sun. It divided the year into 12 months of 30 days each, and added five extra days at the end of each year (an additional day every four years kept the calendar synchronized with the sun). These extra days were not part of any month. Each month was divided into three ten-day periods.

Various Lunar Calendars developed independently throughout the world, most notably in the Fertile Crescent. Based on the 29.53059-day cycle of the moon's phases, a lunar calendar uses months of 29 days and 30 days in a complex alternation. To keep pace with the seasons, years of 12 months and 13 months alternated, with seventeen of the former and ten of the latter in every 27-year period. Both the Hebrew and Islamic Calendars of today are lunar calendars. In the Hebrew Calendar, a year with 13 months is called an "embolismic year."

The Mosaic Calendar, devised about 1500 BCE, was based on a Babylonian invention: the seven-day week. The Mosaic year is divided into 52 7-day weeks, with one day (two in a leap year) added to keep pace with the sun. The additional days are not part of any week. (Such an unattached day, by the way, is called an "intercalary" because it is inserted into the calendar, as it were, "between the lines.")

Later, as the Sabbath became of supreme importance, it became unthinkable to have any single day — much less two in leap years — not attached to a week. If unattached days

were allowed, then the steady progression of a Sabbath every seven days would be interrupted once a year, leaving eight or even nine days between Sabbaths. (Apparently God — who had created the 365.2422-day year to begin with, and who surely knew enough math to realize that 365.2422 was not evenly divisible by seven — would be terribly insulted if the seven-day interval between Sabbaths was ever violated. This “reasoning” continues to the present day.)

Ancient Rome originally used a lunar calendar, but the many complex adjustments were badly handled, and by the year 46 BCE the Roman calendar was hopelessly out of synchronization with the seasons of the actual year.

The Julian Calendar

Julius Caesar, advised by the Egyptian astronomer Sosigenes, fused the Egyptian and Lunar calendars to create the Julian calendar of 12 months, each 30 or 31 days long in strict alternation (except Februarius, with 29 days). A Leap Day was added to Februarius every four years. The year 46 BCE (also called *Annus Confusionis* or “The Year of Confusion”) was allowed to last 445 days, and then 45 BCE started on schedule on the First of Ianuarius (previously the year had started on the First of Martius). After Caesar’s assassination, the month Quintilis was changed to Julius in his honor.

Under the reign of Caesar’s successor, Augustus, the Senate renamed the month Sextilis as Augustus, adding a stolen day from February to bring it up to the same 31 days as Julius. Fortunately, this charming custom was not continued, so we are spared the months of Tiberius, Caligula, Claudius, and Nero. (Although I must confess that there is a certain perverse poetic justice in the idea of the world celebrating the birth of Christ in a month named for the Emperor who was, very likely, the original Antichrist)

For the record, the names of the Roman months were: Martius, Aprilius, Maius, Iunius, Quintilis (Julius), Sextilis

(Augustus), September, October, November, December, Ianuarius, and Februarius.

In 321 CE the Emperor Constantine, freshly converted to Christianity and eager to impose his beliefs on the Empire, fused the Mosaic seven-day week with the Julian 365-day year. (Prior to this, the Romans had alternating weeks of seven and eight days.) Constantine's Decision proclaimed that the year could be legally divided into either months (for secular purposes) or weeks (for Christian religious purposes).

By sanctioning the seven-day week and allowing it to spread throughout the Empire and beyond, Constantine made it all but impossible to arrange a "perennial" calendar — that is, one that repeated from month-to-month, quarter-to-quarter, or year-to-year. (Our present calendar repeats every 28 years, with some complex exceptions.) Constantine, thus, is considered by some to be the patron saint of those who print and sell calendars.

The Gregorian Calendar

The Julian Calendar functioned quite well, and far outlasted the Roman Empire. It was, however, slightly out of adjustment, gaining 11 minutes and 14 seconds on the sun each year. Over the course of 125 years, the difference amounts to one full day. By 730 CE, the Venerable Bede pointed out that the year was about six days out of sync — that is, the Equinoxes and Solstices were coming about six days earlier than they had in Julius Caesar's time.

Commissions were appointed, committees formed, and after only 850 years a solution was proposed. In 1582 CE, Pope Gregory III ordered what is now called the Gregorian Adjustment: henceforth, three leap days would be omitted from every 400 years. The system used for omitting these days was simple and elegant: three out of four century years (1700, 1800, 1900) would no longer be counted as leap years. Only those century years divisible by 400 (i.e. 1600, 2000, 2400) would remain leap years.

The resulting calendar, called the Gregorian Calendar, would only lose one day in 3,000 years — which was considered Good Enough.

To bring the year back into sync with the sun, Gregory also ordered that the accumulated error — which had grown to ten days by 1582 CE — be dropped from the current year. October 4, 1582 was directly followed by October 15, 1582, and the Gregorian Calendar was in full swing. (There's a murder mystery gimmick in there somewhere: "Where were you on the night of October 6, 1582?")

The Gregorian Calendar was in full swing at least in those areas of the world that acknowledged Pope Gregory's authority. Protestant Europe and England (as well as England's colonies) refused the Gregorian Adjustment until 1752...by which time the error, thanks to the century year of 1700, had grown to 11 days. (That's why George Washington listed his birthday in 1732 as February 11 Old Style *and* February 22 New Style.) Russia resisted the Adjustment until 1918, when they had to subtract 13 days. And the Greek Orthodox world *still* refuses to relinquish the Julian Calendar, putting them 13 days behind Gregorian.

Today, our timekeeping accuracy has reached the point where it is more precise than the rotation of the Earth. Every so often, a single second is added or subtracted from the clock to compensate for variations in Earth's movements. These so-called Leap Seconds are under the authority of an agency with a very science-fictional name: the International Earth Rotation Service, located at the US Naval Observatory. The first Leap Second was added on June 30, 1972. As of this writing, the most recent Leap Second was added on January 1, 1999.

Where to Start?

From the time of the Roman Empire until 532 CE, the Julian Calendar numbered years from the date of Rome's founding in 753 BCE. Thus, when Constantine made his Decision in 321 CE, he considered it to be the year 1075 A.U.C. (which stands

for *Anno Urbis Condita*e or “Year after the Construction of the City.”) In 1285 A.U.C., a monk named Dionysius Exiguus, finding time heavy on his hands, sat down to calculate how long it had been since Christ’s birth. He came up with a figure of 532 years, and started calling that Year One. The year 1285 A.U.C., under this new system that came to be known as the Christian Era, was the year A.D. 532 (A.D. stands for *Anno Domini*, or “In the Year of the Lord.”) All of the years before 1 A.D. were referred to as B.C. or “Before Christ.”

As it turns out, Dionysius misplaced a few decimal points, and it is commonly acknowledged that he was a few years off. This leads to a delicious paradox: Jesus Christ was most likely born at least four years Before Christ.

Be that as it may, the Christian Era was well-established throughout Christendom by the time Pope Gregory made his Adjustment.

As the Gregorian Calendar spread to folk who did not necessarily believe in divinity of Christ, it became more common to speak of the “Common Era” instead of the “Christian Era.” In the late 20th century, when the Gregorian Calendar became established as the official calendar of billions of non-Christians, the abbreviation CE began to replace A.D., so that one would speak of Apollo 11 landing on the moon in 1969 CE (The abbreviation BCE, for “Before the Common Era,” similarly replaces BC.) This is the usage I’ve followed in this book.

Other folk, of course, still use systems which are not based on the Common Era. The Hebrew Calendar counts from a calculated date for Creation in the year 3761 BCE. Islamic peoples count their years from the Hegira in 622 CE. In science fiction, it is not uncommon for years to be dated from 1945 CE (The Atomic Age), 1958 (the Space Age), or even *Brave New World’s* ingenious “In the Year of Our Ford.” The Bioregional Calendar counts from the atomic bombing of Hiroshima. In Isaac Asimov’s *Foundation* series, years are dated from the formation of the Galactic Empire.

All these schemes for dating years from a specific event

lead to a problem: using negative numbers to indicate years before that event. It is counter-intuitive and downright awkward, for example, that 753 BCE was followed by 752 BCE, or to work out that the Pharaoh Akhenaten's 17-year reign, which started in 1379 BCE, finished in...(mumble, mumble, carry the one)...did everyone get 1362 BCE?

The late geoscientist Cesare Emiliani proposed pushing the starting date of our calendar back to the beginning of the current geological period, the Holocene Epoch — which was more-or-less 10,000 BCE. Since the Holocene Epoch marked the end of the last Ice Age and saw the beginnings of agriculture and civilization, its start is a significant date for the human species. And it's far enough back in time that we would no longer need negative numbers to refer to historical events like the building of the Pyramids or the settling of Australia. The Holocene Epoch has the added benefit of applying to the entire world, not just one nation, culture, or religion.

Conversion from the Common Era to the Holocene Epoch (H.E. for short) could not be simpler. Just add 10,000 to every CE date (so that Armstrong and Aldrin landed in 11,969 H.E.) and subtract each BCE date from 10,001 (so that our friend Akhenaten reigned from 8622 H.E. to 8639 H.E.)

Who Needs Years?

Now, a year is a fairly inexact period for human beings. In an extreme case, consider a favorite sf trope, thermonuclear armageddon. Let's say that the Great War begins at 11 pm on December 31, 2103 and ends at 1 am on January 1, 2104. Future historians, given only the years (2103-2104), will conclude that the Great War lasted a year or possibly two, rather than just two hours. Similarly, a war that starts on January 1, 2055 and ends on December 30 of the same year (a total of 360 days) will be seen by history as comparatively brief.

If we're going to count time from an arbitrary date in the past, why bother with years at all? The day is a much more convenient unit for accurately counting events. Why not give up the year, and simply number the *days* from some past event?

In 1583 CE, the French scholar Joseph Justus Scaliger devised just such a system for counting days. Tracing various astronomical and civil cycles back until they all started on the same day, he set January 1, 4713 BCE as his starting date. Scaliger named this system after his father, Julius Scaliger, calling it the "Julian Period" or "Julian Day." The *Eagle*, for example, landed at Tranquility Base on Julian Day 2,440,423.

The Julian Period proved useful to historians, allowing them to effectively compare, say, the Assyrian calendar to the Roman, or ancient Greek dates to ancient Chinese, etc. But it was astronomers who found the Julian Period most useful ... in fact, the system is still used routinely by astronomers today. (Since astronomers work at night, they set the beginning of each Julian Day to noon, rather than midnight. This allows all of a single night's observations to bear the same Julian Day number.)

In her excellent novel *The Outcasts of Heaven Belt* (1978), Joan Vinge goes Scaliger one better. Her spacefaring society dispenses entirely with years, months, *and* days ... instead, they count time in a metric system based on the second. In Vinge's system, one hour is approximately 3,000 seconds (or 3 kiloseconds), a day is about 80 kiloseconds, two weeks is a little more than a million seconds (1 megasecond), and a billion seconds (1 gigasecond) is about 30 years.

(Incidentally, just in case you are dying to know, one second is officially defined as 9,192,631,770 oscillations of the cesium atom.)

Whither the Calendar?

Calendar reform did not stop with Pope Gregory. To this day, many individuals and organizations, impatient with the

Gregorian Calendar's foibles, have suggested reformed calendars. Usually, these are simplified, repeating calendars that can be used perpetually. Just about all of them have been used in various science fiction stories and books.

The simplest is the International Fixed Calendar, in which the year is divided into 13 months of exactly 28 days each. The thirteenth month, called Sol, is followed by an intercalary day (Year Day). In Leap Years, another intercalary day, Leap Day, is added between June and July. Neither of these intercalary days has a weekday associated with it ... so that each year, the New Years weekend has an extra day: Saturday December 28 is followed by Year Day December 29, then by Sunday January 1.

All months have the same four-week calendar: the 1st is always a Sunday, the 28th always a Saturday (unfortunately for the superstitious, the 13th always falls on a Friday). Memorize one calendar page, and you will never need to look at another.

Philip José Farmer used a variation of the International Fixed Calendar in his *Dayworld* series.

The International Fixed Calendar never really caught the popular imagination, perhaps because a 13-month year cannot be divided evenly into four seasons (although the supposed unluckiness of the number 13 probably had a lot to do with it).

Another reformed calendar, The World Calendar, was proposed after World War II. The World Calendar consists of twelve months, divided into four seasons of three months apiece. In each triad, the first month has 31 days, and the next two have 30 days. The first month (January, April, July, and October) begins on Sunday; the second month (February, May, August, and November) on Wednesday; the third month (March, June, September, and December) begins on Friday. Year Day (an intercalary) occurs on December 31 every year, and Leap Day on June 31 of each Leap Year. The New Years weekend would go: Saturday, December 30; Year Day, December 31; Sunday, January 1.

The World Calendar is easily the most successful reform calendar. For a time in the late 1950s, it even looked as if the United Nations might adopt the World Calendar. The Vatican endorsed the World Calendar in 1954. The year 1961 was chosen as the switchover year, because January 1, 1961 fell on a Sunday. However, the United States opposed calendar reform "...on religious grounds, since the introduction of a 'blank day' at the end of each year would disrupt the seven-day sabbatical cycle" (according to U.N. Representative Henry Cabot Lodge's March 21, 1955 letter to Secretary-General Dag Hammarskjöld.) The U.S. went on to recommend "...that no further study of the subject should be undertaken."

Other religious groups opposed the change, and so the World Calendar was put on the world's back burner, where it remains to this day.

Many variations of the World Calendar have been proposed through the years. Isaac Asimov favored a World Seasonal Calendar which eliminated months, dividing the year into four 91-day quarters, plus the usual intercalary Year Day and Leap Day. My own Terran Empire uses a calendar of twelve 30-day months with five intercalary days dispersed through the year (following March, June, September, and December, and preceding January), plus an additional Leap Day every four years.

Other reform proposals have ranged further afield. ASTUC (A Save The Universe Club) proposes A Bioregional Calendar with a four-day week, sixteen "quarts" (or months) of 26-27 days each, and no Leap Years (rather, they count the New Year from the actual moment of the Vernal Equinox, rather than starting at midnight on January 1).

Other Worlds, Other Calendars

Human civilizations on other worlds, as well as alien civilizations, will have their own astronomical cycles to base calendars upon. A variety of Martian calendars have been proposed, to match a year of 668.5990 sols (a "sol" is a

Martian day — 24 hours, 39 minutes, 35.9 seconds). This is of more than academic interest; during the Viking and Mars *Pathfinder* missions, Earthbound NASA project scientists lived on a Martian schedule, active when it was daylight at the landing site, and joining their spacecraft in sleep during the Martian night. The most successful Martian calendar, codified by Thomas Gangale, is called the Darian Calendar after Gangale's son.

It has been suggested in sf that far future human civilizations, independent of Earth's astronomical cycles, may switch to a year of exactly 360 days (twelve 30-day months), 400 days (ten 40-day months), or even (à la Joan Vinge) 100,000 seconds (approximately 3 of our years).

Final Words

To close this essay on alternate calendars, here is one particular date — the archetypally science-fictional January 1, 2001 CE — in as many different calendars as I could find:

Bioregional: Grounday, 14 Athwinter, A.H. 70

Darian: Mina 14, M.E. 13

Gregorian (modern civil calendar): January 1, A.D. 2001

Hebrew: 6 Tevet 5761

Holocene Epoch: January 1, 12,001 H.E.

Islamic: 6 Shawwal, 1421 A.H.

Julian (old civil calendar): December 19, A.D. 2000

Julian Day: 2,451,911

Roman (Julian): December 19, 2754 A.U.C.

SOURCES

Books

Besides all of the sf/fantasy novels and short stories cited above, I consulted many reference books. Among the most useful were:

- Anatomy of Wonder* (3rd edition) edited by Neil Barron, Bowker, 1987
- 1995: The Legion of Super-Heroes Sourcebook* by Tom & Mary Bierbaum, DC Comics, 1992
- The 365 Days: The Story of Our Calendar* by Keith G. Irwin, Crowell, 1963
- The Best of Science Fiction TV* by John Javna, Harmony Books, 1987
- The World of Robert Jordan's The Wheel of Time* by Robert Jordan and Teresa Patterson, Tor, 1997
- The Deryni Archives* by Katherine Kurtz, Ballantine, 1986
- Edgar Rice Burroughs: Master of Adventure* by Richard A. Lupoff, Ace, 1965
- A Pliocene Companion* by Julian May, Ballantine, 1984
- What Happened When* by Stanford M. Mirkin, Washburn , 1966
- A Guide to Barsoom* by John Flint Roy, Ballantine, 1976
- Super DC Calendar 1976*, Warner Books, 1976

Internet

I am exceedingly grateful to the many fans whose labors of love on the Internet helped to make *The Science Fiction Book of Days* a much easier undertaking than it would have been otherwise. Among these gallant souls are:

Thomas Gangale, who created the Darian Calendar and gathered together a treasure trove of more information about Martian timekeeping than I ever knew existed. Information is available at

<http://www.jps.net/gangale/mars/chronium/chronium.htm>.

Richard S. Holmes, who produced a chronology of Larry Niven's Known Space stories, available at

http://web.syr.edu/~rsholmes/reads/books/known_space.html.

Rick McCarty, who tirelessly maintains The Home Page for Calendar Reform at

<http://ecuvax.cis.ecu.edu/~pymccart/calendar-reform.html>.

Onno Meyer, whose well-researched timeline of C.J. Cherryh's Alliance/Union universe is available at

<http://ea.inf.ethz.ch/cherryh/ref/timeline.html>.

Alberto Monteiro, the creator of the Heinlein Future History timelines at

<http://www.geocities.com/Area51/Corridor/8611/rah2.htm>

and

<http://www.geocities.com/Area51/Corridor/8611/rah2.htm>

The A Save The Universe Club (ASTUC), whose Bioregional Calendar Home Page is at

<http://www.lonet.ca/res/wshiell/abc.htm>.

The US Naval Observatory's Time Services Department at
<http://tycho.usno.navy.mil/>

William Woods, who created the Woods Calendar. More information is available at
<http://www.jps.net/gangale/mars/other/woods.htm>.

The World Calendar Home Page at
<http://ecuvax.cis.ecu.edu/~pymccart/world-calendar.html>.

Acknowledgments

This project would not have been possible without the assistance of Thomas G. Atkinson and Dan (Refield) Corcoran, who not only supplied me with many references, but who cheerfully put up with teetering piles of books and endless rewinds of the VCR, and who never once threw away any of the countless scribbled notes that I left everywhere. Special thanks to Thomas for sowing the seed that grew into this book; he was the first to notice the curious recurrence of the date November 5 in time travel movies. (He is also responsible for the May 4 pun.)

Next Edition

Like the calendar, *The SF Book of Days* is incomplete. If you know of dates, days, or months in science fiction or fantasy that are not included, please send the information (including your source) to

speed-of-c@scatteredworlds.com or

Speed-of-C Productions, P.O. Box 265, Linthicum, MD 21090. Your name will appear in acknowledgments in a future edition.

If you enjoyed this book,
please spread the word
by telling some friends.

Send any comments, questions, or suggestions to:

Speed-of-C Productions
PO Box 265
Linthicum, MD 21090-0265

or visit the Scattered Worlds website at

Books from Speed-of-C Productions

The Curse of the Zwilling

by Don Sakers

0-9716147-2-5 • 384 pages • \$19.99

It's Hogwarts meets Buffy at Patapsco University: a small, cozy liberal arts college like so many others – except for the Department of Comparative Religion, where age-old spells are taught and magic is practiced. When a favorite teacher is found dead under mysterious circumstances, grad student David Galvin finds that a malevolent evil has awakened. And now David, along with four novice undergrads, must defeat this ancient, malignant terror.

The SF Book of Days

by Don Sakers

0-9716147-6-8 • 184 pages • \$14.99

Drawn from the pages of classic sf literature, here is a science fiction/fantasy event for every day of the year...and for quite a few days that aren't part of the year. From Doc Brown's arrival in Hill Valley (January 1, 1885) to the launch of the Bellerophon (Sextor 7, 2351), this datebook is truly out of this world.

PsiScouts #1: At Risk

by Phil Meade

0-9716147-3-3 • 132 pages • \$9.99

In the 26th century, psi-powered teenagers from all over the Myriad Worlds join together as the heroic PsiScouts.

Order through your favorite bookstore, online retailers such as Amazon.com, via our website (www.scatteredworlds.com), or mail orders to Speed-of-C Productions, PO Box 265, Linthicum, MD 21090-0265. For mail orders, please include \$4 per book for shipping & handling.

The Scattered Worlds universe of Don Sakers

Dance for the Ivory Madonna

a romance of psiberspace

by Don Sakers

0-9716147-1-7 • 460 pages • \$19.99

Spectrum Award finalist; 56 Hugo nominations

*"Imagine a **Stand on Zanzibar** written by a left-wing Robert Heinlein, and infused with the most exciting possibilities of the new cyber-technology." -Melissa Scott, author of **Dreaming Metal**, **The Jazz***

A Voice in Every Wind

two tales of the Scattered Worlds

by Don Sakers

0-9716147-5-X • 108 pages • \$7.50

On a world where meaning lives in every rock and stream, and every breeze brings a new voice, one human explorer stands on the threshold of discoveries that could alter the future of Humanity.

The Leaves of October

a novel of the Scattered Worlds

by Don Sakers

0-9716147-4-1 • 304 pages • \$17.50

Compton Crook Award finalist

The Hlutr: Immensely old, terribly wise...and utterly alien. When mankind went out into the stars, he found the Hlutr waiting for him. Waiting to observe, to converse, to help. Waiting to judge...and, if necessary, to destroy.

Order through your favorite bookstore, online retailers such as Amazon.com, via our website (www.scatteredworlds.com), or mail orders to Speed-of-C Productions, PO Box 265, Linthicum, MD 21090-0265. For mail orders, please include \$4 per book for shipping & handling.

GET FREE BOOKS

For every ten Speed-of-C books you buy,
we'll send you another one free.

You can buy ten different titles,
ten copies of one title, or any combination.

In each of our books,
you'll find a barcode and number
in the bottom right corner of the last page.
Cut out the original barcodes from
ten Speed-of-C books, and send them
to us along with your name, mailing address,
and email address.

When our next book is released,
you'll receive a free copy.
It's as simple as that.
